~~LOCK~~ LIFE

DOORSAFE - A LOCK FOR LIFE

Lock4Life is the brand new door lock concept introduced to our renowned DoorSafe range of door locks and hardware. An integrated door locking system, Lock4Life enables you to provide your customers with a lock that will adapt to their ever changing needs.

Easy to switch

Lock4Life conforms to the industry standard routing detail, making the change from your existing locks as simple and painless as possible.

Easy to fit

In addition to the standard routing detail, Lock4Life's ease of fitting and installation is further enhanced by self-adjusting v-cams and 3mm adjustment at the latch.

Versatile

With a range of optional features, Lock4Life offers the potential to accommodate the mode of operation most suited to your customers' requirements, including lever/lever, lever/pad, key operated cylinder, auto-mechanical locking and electronic locking. The lock comes with serrations at the top and bottom, allowing it to be used on taller than average doors by using appropriate extensions. French doors can also be accommodated using shootbolt locking at the head and sill. Integration with components from the NT system allows locking options to meet the needs of an ever evolving market. All these solutions are available as first-fit or retro-fit.

Secure

Within the Lock4Life programme all relevant security standards, including PAS24 and Secured by Design can be achieved. Anti-saw hooks at top and bottom locking positions add to the list of security features available with Lock4Life.

POLICE PREFERRED SPECIFICATION

Quality

Lock4Life benefits from the German design and engineering expertise that has made Roto the world's leading manufacturer of door and window hardware.

Backed by Roto's comprehensive guarantee, Lock4Life gives you and your customers the confidence needed in a product range, for today, tomorrow and the future.
